

Serverless Architecture

Component	Responsibility	Technology/Tool
User Interface (UI)	Manages the "Quiet Luxury" aesthetic, collects inputs, and displays results.	Streamlit (Python)
Data Integration	Fetches real-time dividend data and sanitizes tickers (adding .JK)	yfinance (API)
Logic Engine	Handles Lot-to-Share conversion and the 10% Final Tax deduction.	Python Math Logic
Milestone Engine	Maps net income against lifestyle costs (Coffee, Spotify, Gym) to calculate "affordability."	Conditional Logic
Localization Service	Formats output to Indonesian standards (Rounding & Rp. dots)	Python Formatting
Error Handler	Manages invalid tickers or missing data to prevent system crashes.	Validation Blocks

Flow (V1.0)

Dividend Compass is a simple financial tool designed to transform stock data (dividend) into relatable lifestyle metrics for the Indonesian investor. Designed with a "Minimalist" aesthetic, the application streamlines the complexity of the Indonesia Stock Exchange (IDX) by performing ticker sanitization, real-time data retrieval via the *yfinance* API, and precise calculations. Beyond simple math, the application features a Milestone Engine that calculates a user's net annual dividends against daily/monthly costs, such as daily coffee or gym memberships, providing a clear visualization of financial progress. By prioritizing a serverless, cloud-based architecture, the project ensures high-speed performance, offering a sophisticated yet accessible solution for personal asset management.
